***Election/Restrictions***

**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-26, drawn to method of determining fault location, classified in class 324, subclass 532.
  - II. Claims 27-28, drawn to method of determining propagation velocity, classified in class 324, subclass 617.

***Distinctness***

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I does not require the step of dividing the known spatial separation of the first and second transmitter means to the receive means by the time difference determined in step d. The subcombination has separate utility such as for determining transmission line propagation velocity for designing a particular transmission line such as for implementing a delay line.

***Why Restriction is Proper***

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. A telephone call was made to Welch, James on 7/22/2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
